

Track Mats

Product Images

Short Description

- **Heavy-Duty Fabric:** Made from durable polyester (PET) with PVC to withstand rigorous use.
- **Enhanced Traction:** Provides a stable surface for vehicles and equipment, promoting safe operation in challenging environments.
- **Puncture Resistance:** Meets ASTM D751 standards, featuring a puncture resistance of at least 85 lbs for reliable protection.
- **Durable Thickness:** With a thickness of 0.065 inches, it enhances longevity and effectively reduces wear and tear.
- **Easy Deployment:** Simple to position and deploy within the berm for immediate use.
- **Cost-Effective:** Minimizes the need for frequent repairs or replacements, saving on maintenance costs over time.

Description

Safeguards the interior floor of spill containment berms from abrasion and debris damage.

Boost the durability of your spill containment berms with track mats, designed to extend berm longevity without sacrificing functionality. Made from heavy-duty woven fabric, these mats provide traction and safeguard the berm floor from abrasion that can be caused by vehicles or equipment skidding, turning, and braking, as well as from debris lodged in tires. Positioned inside the berm along tire paths, the track mats ensure safe operation in challenging environments, delivering dependable protection where it's needed most.
